P.O. Box 920
Casper, Wyoming 82601

F O R E W O R D

This report is issued annually by the Wyoming State Agricultural Stabilization and Conservation Committee to summarize the accomplishment of the programs administered by ASC committees within the State. Prepared for those interested in the agriculture of this area, the report is divided into eleven parts which include Administrative, Rural Environmental Assistance Program, Price Support Program, Farm Storage Facility and Drying Equipment Loan Program, Beekeeper Indemnity Payment Program, Wool Program, Cropland Adjustment Program, Livestock Feed Program, Compliance Program, Sugar Program, Wheat and Feed Grain Programs.

These programs have far-reaching effects on the economy of the State. The Rural Environmental Assistance Program assists farmers in conserving soil and promoting sound farming practices and provides financial assistance to farmers for projects they could not otherwise complete. The Price Support Programs stabilize the price of commodities with commodity loans and purchase agreements. The Farm Storage Facility and Drying Equipment Loan Program gives farmers encouragement to build needed grain storage facilities on the farm. The Beekeeper Indemnity Payment Program provides payments to beekeepers for loss of bees due to pesticides and herbicides registered and approved for use by the Federal Government. The Cropland Adjustment Program assists in diversion of cropland to conservation use. The Livestock Feed Program helps livestockmen through severe emergency or disaster periods. The Compliance Program is the process of determining whether program objectives are being achieved on the individual participating farm and on a National basis. The Sugar Program allows payments to growers who comply with minimum wage rates and child-labor regulations. The Wheat and Feed Grain Programs permit diversion of cropland to conservation uses and facilitate surplus prevention.

We wish to take this opportunity to express our deep appreciation to the county and community committees for the work they have done in making these programs successful.

STATE EXECUTIVE DIRECTOR

Gordon von Forell

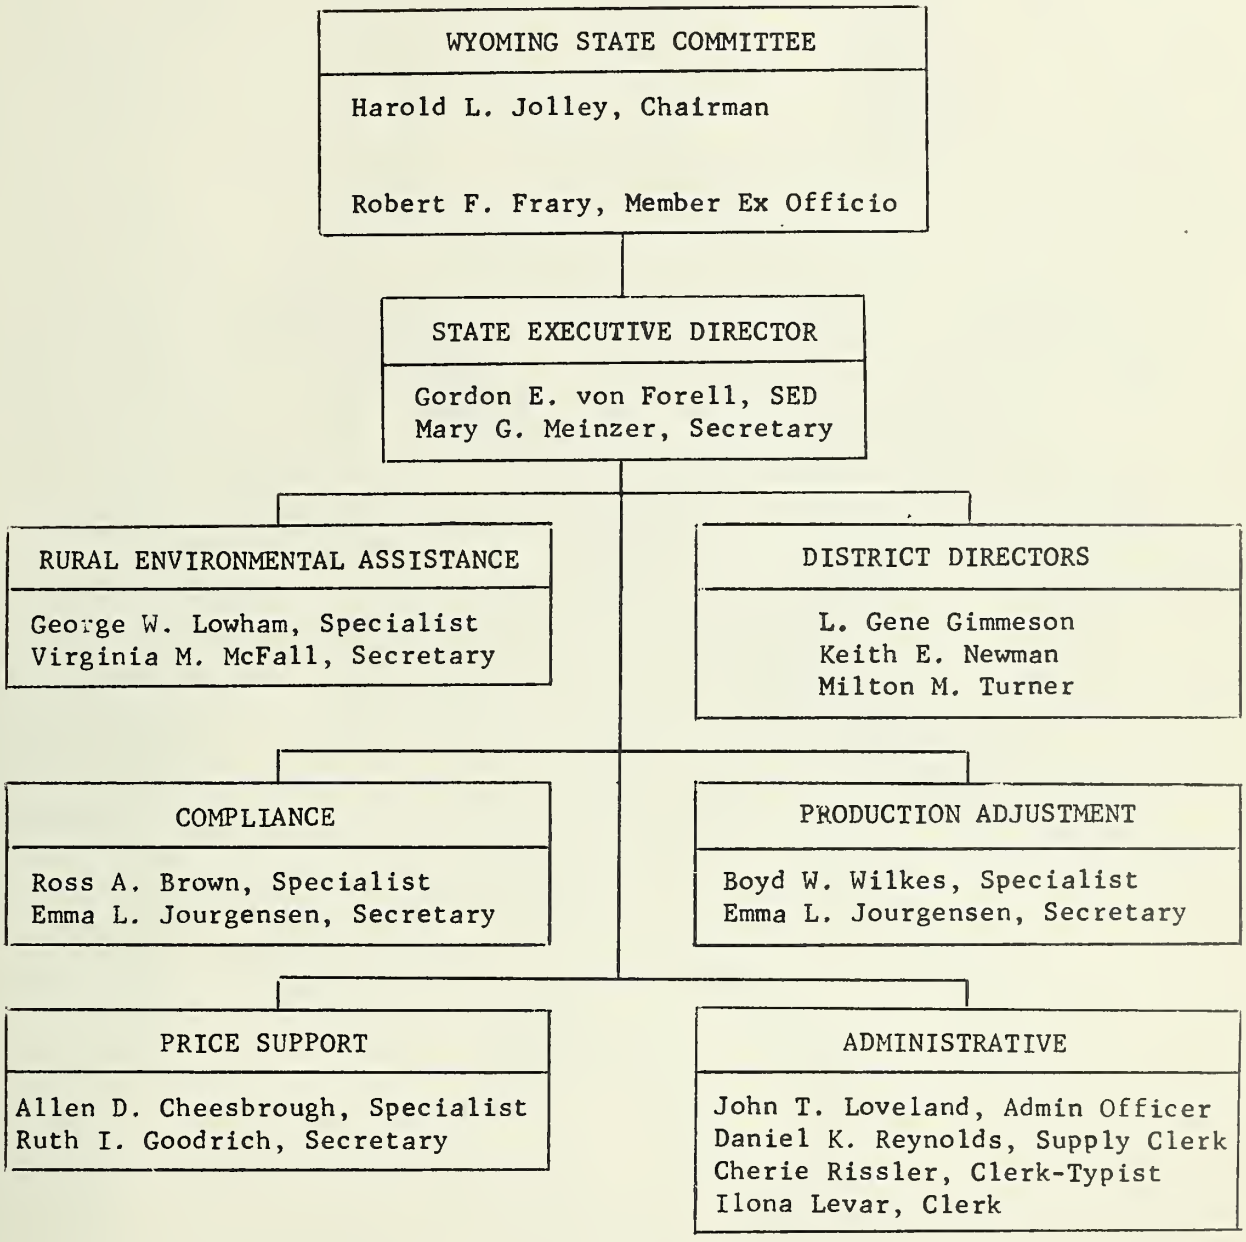
STATE OFFICE ORGANIZATION



ADMINISTRATIVE

ADMINISTRATIVE

1972 FISCAL YEAR COUNTY EXPENDITURES

During the program year $19,988,740 was disbursed to agricultural producers in the State of Wyoming through farm programs administered by ASC Committees; $1,350,533 was disbursed through commodity loans; $1,219,522 in commodity loans was extended under reseal programs; and fifty-five new Farm Storage and Drying Equipment Loans were made resulting in an accumulative outstanding balance of $338,238. This was accomplished with an administrative cost of $789,044 or approximately 3.9 percent of the dollar amount involved. The following listing which was derived from the summary tables contained on pages 2 and 3 further illustrates the comparison of administrative expenses to program and loan volume:

County	1972 F. Y. Admin Expenses	1972 Program Payments	1971 $ Volume For Loans
Albany	$ 17,283	$ 126,345	$

RURAL

ENVIRONMENTAL

ASSISTANCE

PROGRAM

1972 RURAL ENVIRONMENTAL ASSISTANCE PROGRAM FOR WYOMING

Our food, clothing, and shelter depend on conservation of our seemingly abundant natural environmental resources. Installation of conservation measures is costly and many conservation measures return benefits only for future generations, or the returns may be insufficient to repay the cost over a reasonable period of time. Therefore, it is the joint responsibility of the consumer and the farmer to conserve and protect our agricultural resources. To help protect the public interest in these resources, Congress appropriated $195,500,000 for the 1972 REAP for the purpose of assisting farmers and ranchers in carrying out needed conservation work. Wyoming's share of the National appropriation amounted to $1,946,000*, which was expended under direction of ASC State and county committees, as follows:

$2,019,626 - in cost-sharing with producers for completion of approved environmental improvement practices. Included in this amount were pooling agreements which benefited 1,227 farms.

$84,072 - in providing technical assistance to producers through the Soil Conservation Service for the installation of specified practices. This assistance included:

(1) a finding that the practice was needed and practicable on the farm,

(2) necessary site selection and layout work for the practice,

(3) necessary supervision of the installation, and

(4) certification of performance.

$3,649 - for program services consisting of:

(1) salary and travel of employees on the ASCS county office payroll, working under supervision of the Soil Conservation Service,

(2) ASCS supervision and layout of certain range practices, &

(3) supplies (mostly stakes) used by the SCS on specified REAP practices.

$1,065 - for 1% agreements with the Wyoming State Forestry Division.

$191,346 - was expended in cost-sharing with farmers and ranchers to carry out restoration work on irrigation facilities and farmland damaged by flooding.

$18,422 - in providing technical assistance to producers carrying out restoration work.

*Funds expended in excess of the State allocation will be borrowed from 1973.

The following tables depict, by counties, the total accomplishment under the 1972 REAProgram:

PRICE

SUPPORT

PROGRAM

1971 COMMODITY LOAN AND PURCHASE PROGRAM

PRICE SUPPORT -- Price support operations have been carried out for specified commodities by the Commodity Credit Corporation (CCC) since 1933. Throughout this period support has been directed or authorized by specific legislation. The first legislation that made price support mandatory for certain commodities was The Agricultural Adjustment Act of 1938.

Price Support and Production Adjustment Programs work together in helping balance production with demand. Price support operations are handled primarily through loans, purchase and payment programs.

The purpose of the price support operations is to stabilize, support, and protect farm income and prices; to assist in the maintenance of balanced and adequate supplies of agricultural commodities and their products, and to facilitate the orderly distribution of commodities.

COMMODITY LOAN PROGRAM -- Under the 1971 Loan Program, applications for price support were accepted until March 31, 1972 on honey, dryed beans and rye; until April 30, 1972 on barley, oats, and wheat; and until June 30, 1972 on corn. The loans on all crops matured one month after the final date for accepting applications for price support.

Thirty days prior to maturity of the loans the borrower was notified of these alternatives on his 1971 crop commodities:

(1) Pay the loan in full, plus 3.6 per cent interest, or

(2) Deliver the commodity to CCC, or

(3) For farm-stored barley, corn, oats, rye and wheat, and for warehouse-stored barley, oats and wheat, the commodity can be resealed and the loan extended another year.

Tables showing the 1972 crops placed under loan as well as tables showing the status of previous crop years remaining under price support are included on the following pages:

1971 COMMODITY LOAN AND PURCHASE PROGRAM

SUPPORT RATES ON 1971-CROP COMMODITIES BY COUNTIES -- The following basic county support rates were established for 1971-crop commodities with small adjustments for premiums and discounts to reflect variations in quality:

COUNTY	US #2 or better Barley	US #2 or better Corn	US #1 G.N. Beans	US #1 Pinto Beans	US #2 or better Grain Sorghum	White Table Honey	US #3 or better Oats	US #2 or better Rye	US #1 Wheat

Weston	.75	1.14	7.01	6.27	1.53	14.8¢	.58	.80	1.12

The above county support rates were based on national support rates as follows:

Commodity	U. S. Grade	National Average Loan Rate
Barley	#2	$ .81 bu.
Corn	#2	1.08 bu.
D. E. Beans	#1	6.40 cwt.
Gr. Sorghum	#2	1.73 cwt.
Honey	#C	.14 lb.
Oats	#3	.54 bu.
Rye	#2	.89 bu.
Wheat	#1	1.25 bu.

* Average of eleven classes of beans.

STATE TOTAL OF 1971 CROP LOANS

FARM STORAGE FACILITY

&

DRYING EQUIPMENT LOAN PROGRAM

FARM STORAGE AND DRYING EQUIPMENT LOANS

OBJECTIVES. The Storage and Drying Equipment Loan Program gives farmers encouragement to build needed grain storage facilities on the farm. By having needed storage the farmer can store his grain at harvest time and safely store it until the market price is more favorable. This also helps to reduce the market glut at harvest time.

Good farm storage buildings protect grain from spoilage through weather and insect damage and prevent loss of quality from contamination by birds and rodents.

WYOMING CONSTRUCTION. Since June 1949, when this program was inaugurated, about 7,589,309 bushels of new farm storage has been built in Wyoming through the incentive of the Farm Storage and Drying Equipment Loan Program. This farm storage has been instrumental in bringing about more orderly and timely marketing of Wyoming grains.

A cumulative summary by county, of these loans follows:

FARM STORAGE AND DRYING EQUIPMENT LOANS

BEEKEEPER

INDEMNITY

PAYMENT

PROGRAM

BEEKEEPER INDEMNITY PAYMENT PROGRAM

On June 14, 1971, the Beekeeper Indemnity Payment Program was announced by the Secretary of Agriculture in accordance with authority under Section 804 of the Agricultural Act of 1970.

The program was made retroactive to cover bee losses dating back to January 1, 1967. It is authorized through 1973.

A beekeeper is eligible for indemnity payment if he suffered a loss of honey bees under the following conditions: If he used pesticides, but this use in no way contributed to the loss of his bees; he took reasonable precautions to protect his bees from exposure to pesticides if he had advance notice that pesticides were going to be used near his bee colonies, and that after exposure he took reasonable action to reduce the bee loss; the loss of bees was due entirely to the use of pesticides, not partially due to some other cause.

Indemnity payments can be made only in cases in which the loss occurred as a result of the use of economic poisons which had been registered and approved for use by the Federal Government.

Applications filed and paid between June 11, 1971 and June 30, 1972 are summarized in the following table:

BEEKEEPER INDEMNITY PAYMENT PROGRAM

APPLICATIONS PAID BETWEEN JUNE 11, 1971 & JUNE 30, 1972

WOOL PROGRAM

1971 MARKETING YEAR REPORT

PROGRAM OBJECTIVE -- Under the National Wool Act of 1954, as amended, wool is recognized as an essential and strategic commodity not produced in sufficient quantity in the United States. It is the declared policy of Congress, as a measure of national security and for the general economic welfare, to encourage the domestic production of wool at prices fair to both producers and consumers.

Support Level -- The support level for shorn wool marketed in the 1971 calendar year was 72 cents per pound. The Agricultural Act of 1970 provides for the support of shorn wool at 72 cents per pound for the three marketing years ending December 31, 1973.

Payments to Producers

Shorn Wool - The U. S. average price received by producers for shorn wool in 1971 was 19.4 cents per pound. The payment rate on shorn wool was 271.1 percent which was determined as follows:

Support price	72.0 cents
National average price	19.4 cents
Difference	52.6 cents

52.6¢ ÷ 19.4¢ = 271.1% (the percentage increase needed to bring the national average price up to the announced support level).

Each producer's wool payment was determined by multiplying his net dollar returns from marketings of shorn wool during 1971 by the payment rate of 271.1 percent.

Nationally, payments through June 15, 1972, of $85 million were made to 143,588 producers or about 169 million pounds of shorn wool marketed in 1971. In Wyoming, payments of $8,944,002 were made to 2,161 producers on about 17.4 million pounds of shorn wool.

Pulled Wool - The payment rate for wool on unshorn lambs marketed in 1971 was $2.10 per hundredweight of lambs to compensate growers for the wool on the lambs. This rate was based on the payment rate for shorn wool, the average weight of wool per hundred pounds of lambs, and the value of pulled wool relative to the value of shorn wool:

Shorn wool support price	72.0 cents
National average price	19.4 cents
Difference	52.6 cents
Times the value of pulled wool relative to shorn wool	80 percent
	42.1 cents
Times the average yield of wool per 100 pounds of unshorn lambs	5 pounds
	$2.10 per cwt.

Nationally, payments through June 15, 1972, of $17.2 million were made to 106,661 producers on 9.8 million cwt. of unshorn lambs marketed in 1971. In Wyoming payments of $1,432,206 were made to 2,064 producers on 682,009 cwt. of unshorn lambs.

Production and Market Conditions

Production - A steady decline in sheep numbers began in 1960 and continued through 1971. The number of stock sheep on farms and ranches on January 1, 1972, totaled 15.8 million head, 7.1 percent less than a year earlier and 45 percent less than on January 1, 1960. Sheep numbers on January 1, 1972, were the smallest on record.

Shorn wool production in 1971 declined 1.6 percent from a year earlier, reflecting a few less sheep shorn and a minor decrease in average weight per fleece. The 159.1 million pounds produced in 1971 was 40 percent below 1960.

Production of pulled wool dropped to 12.8 million pounds in 1971 from 15.2 million in 1970 and 33.6 million in 1960.

Market Conditions - Domestic wool prices declined sharply during the year as prices of imported apparel wool dropped and mill use was down considerably. Returns to sheepmen from the sale of wool plus payments under the program, however, normally amount to only about one-quarter total receipts from sheep raising. The sale of lambs for meat is the major source of returns to sheep raisers.

Lamb prices were ralatively unfavorable during 1960-63, with a low of $15.80 per cwt. in 1961. Beginning 1964 prices trended toward reaching $27.20 in 1969. Lamb prices declined in 1970 and 1971 but continued relatively favorable at $26.40 and $25.90 per cwt., respectively.

Prices and Income - Low domestic wool prices continued to reflect low world prices and increased competition from manmade fibers. The national average price received by producers for shorn wool marketed in 1971 was 19.4 cents per pound, 16.1 cents lower than a year earlier.

Total wool returns (receipts from sales plus payments) to producers were up $9 million from a year earlier because of increased marketings despite reduced production and lower prices.

Advertising and Promotion - Deductions from producers' payments to be used for advertising and promotion of wool and lamb were made in 1971 at the rate of 1 1/2 cents a pound on shorn wool and 7 1/2 cents a hundred pounds on unshorn lambs. Advertising and promotional activities were carried out by the American Sheep Producers Council organized for these purposes by sheep growers. Deductions on 1971 marketings totaled about $3.0 million.

NATIONAL AVERAGE PRICE RECEIVED

The national average price received by all growers and the incentive payment rate for each of the marketing years follows:

Marketing Year	Nat'l. Average Price Rec'd. by Growers (cents per lb.)	Shorn Wool Payment Rate (% of net proceeds)	Unshorn Lamb Payment Rate (cents per cwt.)
1955	42.8	44.9	77
1956	44.3	40.0	71
1957	53.7	15.5	33
1958	36.4	70.3	102
1959	43.3	43.2	75
1960	42.0	47.6	80
1961	42.9	44.5	76
1962	47.7	30.0	57
1963	48.5	27.8	54
1964	53.2	16.5	35
1965	47.1	31.6	60
1966	52.1	24.8	52
1967	39.8	65.8	105
1968	40.5	65.4	106
1969	41.8	65.1	109
1970	35.5	102.8	146
1971	19.4	271.1	210

HOW IS WOOL PROGRAM FINANCED? Money for the incentive payments comes from import duties collected on all wool and wool manufactured goods from any foreign country.

SUMMARY. The tables on the following pages give a rather complete statistical story of the Wool Program as it operated in Wyoming in the 1971 marketing year. Tables for previous marketing years may be found in the ASCS Annual Reports for previous years.

CROPLAND ADJUSTMENT PROGRAM

CROPLAND ADJUSTMENT PROGRAM

The Cropland Adjustment Program was established under Title VI of the Food and Agriculture Act of 1965.

OBJECTIVES. The Cropland Adjustment Program (CAP) seeks generally -- through adjustment and conservation payments -- to divert cropland not needed at present for agricultural production into some recreation or conservation use. Agreements are for 5 to 10 years. If the farmer agrees to permit public access, without charge, to his CAP land for hunting, fishing, hiking, or trapping, he can receive an extra incentive payment under the program.

CAP is a long range program under which farmers have voluntarily agreed to take cropland out of production from 5 to 10 years and devote it to a recreation or conservation use. In return, the farmer receives an annual adjustment payment based on the value of crops previously grown and the productivity of the acreage put into the program. The farmer also can receive cost-sharing for establishing approved protective cover on the land. They may not harvest a crop from the designated acres or graze them except when authorized in emergencies.

GREENSPAN. Greenspan is also authorized under Title VI of the Food and Agriculture Act of 1965. Under Greenspan governmental bodies can receive financial help in obtaining cropland for permanent conversion to open space, public recreation, wildlife habitat, natural beauty, and other uses that control air and water pollution. The cropland must be land taken out of production of crops not needed at present time. Greenspan land-acquisition grants may cover up to 50 percent of the cost of cropland acquired under its provisions.

There is very little cropland adjacent to local towns and cities in Wyoming, so there will be limited activity in Greenspan. In 1971, we had no requests for assistance under Greenspan.

SUMMARY. The following tables show the extent of agreements signed under the regular Cropland Adjustment Program in the first two years of the program (1966 and 1967). No funds were available to enter into new agreements since 1967.

1972 CROPLAND ADJUSTMENT PROGRAM

LIVESTOCK FEED PROGRAM

1971-72 LIVESTOCK FEED PROGRAM

OBJECTIVE. The Livestock Feed Program is to help livestockmen through severe emergency or disaster periods so they can maintain their breeding herds, which are the foundation of their ranching businesses.

ADMINISTRATION OF PROGRAM. Under the Livestock Feed Program, Commodity Credit Corporation owned feed grains are offered at reduced prices in keeping with local support levels for the kinds of grain supplied. The grain, as available, is offered through the Agricultural Stabilization and Conservation Service (ASCS) county committees, and they are charged with the responsibility for determining eligibility of individual livestock owners for assistance.

ACTIVITY IN WYOMING. The winter of 1971-72 was abnormally early and severe in four southwestern Wyoming counties, Carbon, Lincoln, Sweetwater and Uinta. The storms started in October and by the first of December many ranchers were faced with either finding cheaper feed or selling their breeding herds. Many ranchers, who could, moved their livestock, at great expense, to other areas and other states. Hay and grain became scarce and prices skyrocketed. The problems were presented to the County USDA Disaster Committees in each of the four counties. The Disaster Committee in each county recommended that their county be declared an emergency area in which assistance would be given under the Livestock Feed Program. The State USDA Disaster Committee met and recommended to the Secretary of Agriculture that the four counties be declared an emergency area since the severe prolonged storm conditions had reduced feed supplies to the point where assistance was needed to help eligible livestockmen preserve and maintain foundation herds and other eligible livestock. Governor Stan Hathaway certified the need for the program. On January 7, 1972 these counties were designated by the Secretary of Agriculture as areas of emergency in which assistance will be given under the Livestock Feed Program.

COMPLIANCE PROGRAM

COMPLIANCE

All farm programs administered by ASCS which are passed by Congress are designed to assist farmers, either directly or indirectly. Program implementation involves an agreement of some type between the participating farmer and the Government.

In general, the program agreement between the farmer and the Government involves certain established terms and conditions to fulfill program objectives. In order to earn program benefits, the participating producer is obligated to, depending upon the program, carry out certain terms and conditions. For carrying out these terms and conditions, the Federal Government is obligated to make certain assistance available to the producer, such as payments, technical help in conservation, etc.

Why Compliance? What is the Compliance Program?

Compliance is the process of determining whether program objectives are being achieved on the individual participating farm and on a National basis.

Compliance is an essential part of ASCS programs. It cuts across all program lines and bridges the gap between basic program provisions and the farmer's intentions in carrying out his responsibilities in order for him to receive program benefits and payments.

Compliance is one of our most important operations, and must be done fairly and timely. State and county committeemen have a major responsibility in this field. From the Secretary on down, ASCS officials are vitally concerned that all participating farmers receive fair and equitable treatment under the terms and conditions of the programs administered by ASCS.

Compliance began with the Agricultural Adjustment Act of 1938. Performance and Compliance operations have come a long way from its inception. At the start, each and every field on each farm was measured. Now this is done by certification. In the beginning, hundreds of reporters were hired to determine producers' compliance. Few are needed now. The farmer now has tools, such as aerial photography, photocopies, official acreages, and measurement service facilities to help him determine acreages for program compliance. They now report farm acreages with extreme accuracy. At the beginning of farmer certification of compliance, a large number of farms were spot checked. Now, only 20 to 25 percent of the participating farms are checked.

During the past 1972 program year, a total of 2337 Wyoming farmers certified their acreages under the wheat and feed grain programs. Another 621 sugarbeet producers certified their sugarbeet acreages. Thirty-nine certified their CAP acreages, and 41 certified sugarbeet abandonment acreages.

Of the 3038 farms that certified their 1972 acreages, spot checks were made by county office personnel on 779, or about 26 percent of the certifying farms. These spot-checks disclosed only 7 discrepancies in the acreages certified by the farmer and those found by county office spot check. We think that this shows the integrity and accuracy the Wyoming farmers have used in certifying their program acreages.

Aerial Photography

Aerial photography is our most basic tool for determining compliance with program provisions and acreages. The use of aerial photography provides a pictorial record of land areas involved, and acreages of such areas can be determined in most instances directly from the photographs.

The use of aerial photography for program purposes began in 1935. Prior to this date, acreages of crops and other land uses were determined entirely from ground measurements and sketch maps made by farm reporters, who visited over 6,000,000 farms annually.

ASCS flies approximately 300,000 square miles of new photography every year. Average use of photographs in a county office runs from 6 to 10 years.

Measurement services for determining acreages are provided, upon the farmer's request, at actual cost. Charges for measurement services in Wyoming are $5.00 per farm, plus 5¢ per measured acreage. This is a very moderate cost and can, where a farmer is not sure of his crop or other acreages, prevent him from a loss of, or reduction in his program payments.

SUGAR PROGRAM

1972 SUGAR PROGRAM

The sugar program is designed to assure adequate supplies of sugar for consumers at reasonable prices and to maintain a healthy and competitive domestic sugar industry. The legislation provides quotas for domestic and foreign producing areas and, if necessary, individual proportionate shares for domestic cane and beet producers. Proportionate shares were not in effect for the Years 1961-1964. Increasing sugarbeet acreage and sugar carry over during the period made it necessary to impose acreage restrictions for the 1965 and 1966 crops. Since then there have been no restrictions, and there were none for 1972. For 1972, producers could plant all the sugar beets that the sugar factory would contract.

The basic payment rate is 80¢ per CWT of sugar commercially recoverable, raw value. This rate is reduced by successive steps on production above 7,000 CWT.

Payments to growers of beets are financed out of the general fund of the U. S. Treasury. However, sugar taxes provide funds for the Treasury which more than offset all cost of the program.

Beet growers wanting to qualify for sugar payments are required to pay sugar beet workers in full for labor at rates not less than those determined by the Secretary of Agriculture to be fair and reasonable. They must also observe limitations on the use of child labor.

The 1972 crop was a record crop, with a harvested yield of 19.95 tons per acre, and a planted yield of 19.45 tons per acre.

The following pages provide statistical data by counties for the 1972 crop of sugarbeets.

WHEAT

&

FEED GRAIN

PROGRAMS

1972 WHEAT PROGRAM

The Agricultural Act of 1970 sets a new course for farm programs toward a more market-oriented agriculture. By giving farmers more management options, it increases their range of marketing opportunities. The Act applies to wheat and feed grains for 1971, 1972 and 1973, and is designed to help producers find and develop new markets; compete to hold existing markets; maintain competitive pricing; and keep high quality supplies available to buyers. It provides farmers more freedom and responsibility to decide which crops they can grow most efficiently, and to adjust their production to meet projected demands.

The set-aside plan introduced by the Act replaced the crop by crop acreage restriction of earlier programs. Acreage allotments and bases formerly controlled how much of certain crops a farmer could grow. Under the new plan, a participating farmer sets aside from crop use his share of the National land diversion requirement; maintains his established conserving base for the farm; his remaining cropland is available for his chosen use. For so doing, the producer who joins in the attempt to match United States output with market demand earns a payment equal to the farm yield, times his domestic allotment, times the difference between the National average market price for the first 5 months of the marketing year, and the parity price on July 1. For 1972, the National average was $1.68; parity $3.02; the difference is $1.34 per bushel payment to the eligible growers.

Under the 1972 Wheat Program, producers were offered an additional option to voluntarily set aside wheat cropland equivalent up to 75% of his domestic allotment. The payment rate for the additional option was 94¢ per bushel, times the farms established yield, times the acreage voluntarily set aside.

The charts on the following pages deal with basic data for eligible and participating wheat farms; percentage of participation and payments earned.

1972 FEED GRAIN PROGRAM

The basic goals of the 1972 Feed Grain Program were to give farmers more opportunity for decision making on their farms and to protect and improve their incomes. The 1972 Set-Aside Program provisions were designed to help American agriculture cut back on the acreage planted to all crops and to encourage farmers to produce those crops which best fit their farming operation, reduce carryover stock, help keep our agricultural production in line with anticipated needs, and encourage farmers to put greater reliance on the market place as the principal source of farm income.

Feed grain in Wyoming for the crop year 1972, included corn, grain sorghum and barley. Participation in the program required that a producer must have a history of raising a feed grain in the years 1959-60. This acreage established a base for the grower.

The charts on the following pages deal with basic data for eligible and participating feed grain farms, percentage of participation, and payment earned.

Program Requirements and Payment Rates.

In order to participate in the 1972 Feed Grain Set-Aside Program, an eligible producer was required to meet the minimum qualifying requirements by maintaining his conserving base and to set aside a cropland acreage of average productivity equal to 25% of his total feed grain base. For this qualifying participation, he would receive a payment rate of 80¢ per bushel for corn; 76¢ for grain sorghum, and 64¢ for barley, on the established farm yield times the qualifying set-aside acres (25% of the farm base).

In addition to the qualifying set-aside of 25% he could choose one of the following two alternatives:

(1) He could set aside an additional acreage up to 10% of his corn-sorghum base at a payment rate of 52¢ per bushel for corn; 49¢ for grain sorghum, multiplied by the established yield for each crop. Barley growers were offered up to 20% additional set-aside at 42¢ per bushel, multiplied by the established yield. This was the only option that offered additional voluntary set-aside for barley. (If a producer with a corn-sorghum base wanted to make maximum set-aside under this choice,

he could offer an additional 5 or 10% of the base at the 52¢ rate for corn; 49¢ for sorghum, at the option of the Secretary of Agriculture, who would announce at a later date whether he would accept the offer.) These offers were accepted.

(2) He could set aside an additional 10% of his corn-sorghum base at an 80¢ rate for corn; 76¢ rate for grain sorghum, provided he agreed to reduce his corn sorghum plantings from last year by twice the average of his additional set-aside. (If a producer wanted to make maximum set-aside under this choice, he could offer an additional 5% of his corn-sorghum base at the 80¢ rate for corn; 76¢ rate for sorghum, at the option of the Secretary of Agriculture, who would announce at a later date whether he would accept the offer. These offers were accepted.
